The cast carronades and long guns in this kit do not show the iron ring for the breech line as depicted on the model prototype. If you wish to show this detail. Simply drill a small hole on an angle through the cannon as shown in the diagram below. Then insert an eye bolt into the hole to represent the breech ring. You will need to shorten the stem of the eye bolt before gluing it into the hole. Paint the casting black after you are finished. The casting is made from soft metal and drilling the hole should not be difficult. It does not have to be very deep.”

Insert an eyebolt into a pre-drilled hole in the casting for the breech ring
